NGA ANNOUNCES FORMAL STATEMENT ON OUR ROLE SUPPORTING OUR MEMBERS' CLIMATE GOALS

NGA is Committed to Working Alongside our Members as we Pursue our Region's Climate Goals

The Northeast Gas Association (NGA) recognizes the critical importance of achieving emissions reductions and reducing environmental impacts across the energy sector. Our members are at the forefront of addressing these challenges, and have committed to achieving ambitious and diverse climate, emissions reduction, and technology goals. We take pride in supporting their efforts as they strive to advance clean energy solutions and reduce environmental impacts while ensuring the continued delivery of safe, reliable, and affordable energy.

As a trusted partner and facilitator, NGA is dedicated to supporting our members' efforts to reach their climate objectives. We provide this support in several ways, including:

- Offering educational and networking opportunities for members to learn and share the progress they are making, including through conferences, symposiums, and webinars.
- Coordinating committees focused on clean energy and gas/electric coordination, which enables collaborative efforts that enhance the integration of sustainable practices across the energy sector. These initiatives are critical to driving progress and ensuring that our members remain leaders in the transition to a cleaner energy future.
- Delivering technical and regulatory support, ensuring that our members have the tools and resources necessary to navigate the complexities of the evolving energy landscape.

Looking ahead, NGA is excited to announce the launch of a new initiative, focused on utilizing emerging energy technologies in 2025. This initiative will further bolster our role as a facilitator, providing new platforms for collaboration, knowledge-sharing, innovation, and leadership in emerging energy technologies.

NGA is committed to working alongside our members as we pursue our region's climate goals, and we will continue to support their efforts with the dedication and expertise they have come to expect from our organization.
